

TEACHER MANUAL

Ticketing

Classroom Help Desk for CCST IT Support — everything
instructors need to know

LIVE SYSTEM

ccst.website

VERSION

September 2026

FOR

Instructors

SECTION 01

What This Is

CCST Ticketing is a **classroom help desk** for CCST IT Support. Students submit tickets when they have problems. Instructors (teachers) view, manage, and resolve those tickets.

The system also includes:

LAB MAP

Computer room layout with live device presence

KNOWLEDGE BASE

Common fixes and how-to guides

PORTALS

Curated links to external tools and resources

PROGRESS & TEAM

KPI tracking, class activity, and user management

 <https://ccst-ticketing.mohsen-salman099.workers.dev>

Also available at <https://ccst.website> — works in Chrome, Edge, Safari, Firefox. Students can install it as a web app.

Getting In

Logging In

- 1.
- 2.
- 3.
- 4.

NO ACCOUNT YET?

The system administrator (Mohsen) creates instructor accounts. Ask him to set one up for you.

YOUR ACCOUNT

You should have received your username and password separately. Treat them like any other school system login — don't share them with students.

Who Sees What

Role	What they can do
------	------------------

When you log in as an instructor, you get the full set of tools. Students only see what's relevant to them.

SECTION 02

The Dashboard

Your overview of what's happening in the classroom

SECTION 02

The Dashboard

When you log in, you land on the **Dashboard**. This is your overview of what's happening.

What You'll See

The dashboard updates automatically. If something changes elsewhere, you'll usually see it reflected here without needing to refresh.

Navigating

The main navigation is in the sidebar (or top bar on smaller screens). From anywhere, you can jump to:

Section	What it is
---------	------------

There's also a **logout** option in the menu.

SECTION 03

Tickets

The core of the system — where problems get reported
and resolved

SECTION 03

Tickets

This is the core of the system — where students report problems and instructors resolve them.

Viewing Tickets

Go to **Tickets** to see all tickets. You'll see a list showing:

You can filter and search the list to find specific tickets — by student name, by status, or by keyword.

Opening a Ticket

Click on any ticket to see the full details:

From the ticket detail view, you can:

CREATING A TICKET FOR A STUDENT

Sometimes a student comes to you directly and you want to log the issue on their behalf:

1. Go to

NEW TICKET

1. Select the **STUDENT** the ticket is for.
2. Fill in the **TITLE** — a short summary.
3. Write the **DESCRIPTION** — what's happening, what they've tried, any error messages.
4. Set the **PRIORITY** if needed.
5. Click **SUBMIT**.

The ticket is created and the student will see it in their own view.

Student Workflow

- 1.
- 2.
- 3.
- 4.

SECTION 04

Lab Map

The computer room layout with live device presence

SECTION 04

Lab Map

The **Lab Map** shows the computer room layout as an interactive diagram. Useful for seeing what's happening in the lab at a glance.

What It Shows

Using the Map

💡 LIVE UPDATES

If a device disappears from the map or shows as offline, that's reflected in near-real-time. It's a quick way to spot problems before a student reports them.

The Console

Some devices on the map have a **console** button. Clicking it opens a console panel for that device — this lets you interact with it directly (run commands, check status, etc.). This is the "hardware bench" feature.

The map also has a **classic mode** — if you prefer the older version of the map interface, there's an option to switch. Your preference is remembered.

SECTION 05

Knowledge Base

Common fixes, how-to guides, and reference material

SECTION 05

Knowledge Base

The **Knowledge Base** is a collection of articles with helpful information — common fixes, how-to guides, troubleshooting steps, and reference material.

Browsing Articles

Articles are written in a simple format and rendered for easy reading.

Managing Articles (Instructors)

BUILD A LIBRARY

This is useful for building up a library of common solutions so students can often help themselves before needing to raise a ticket.

Portals

Portals are links to external tools and resources that students and staff use. Think of it as a curated starting page — instead of hunting for links, everything is here.

What's There

Portals typically include links to:

The exact portals depend on what's been configured. Instructors can manage these — add new links, update existing ones, remove ones that are no longer

needed.

SECTION 06

Team & Progress

Who's in the system and how the class is doing

Team & Progress

Team

The **Team** page shows everyone who has an account on the system — students and instructors.

What You Can See

Useful for seeing who's in your class, finding a student's account, or checking who else has instructor access.

Progress

The **Progress** page shows KPI tracking and class progress data. This gives you a view of how things are going — which students are active, which topics or areas are being covered, and how the class is progressing overall.

The exact metrics depend on what's been set up, but the idea is to give you a quick, at-a-glance sense of progress without having to dig through individual tickets or logs.

TEAM

See everyone. Find a student. Check who else is an instructor.

PROGRESS

At-a-glance class activity. No digging through tickets required.

SECTION 07

Common Tasks

Real scenarios you'll actually run into

Common Tasks

Here are the scenarios you'll actually run into, with step-by-step answers.

A STUDENT SAYS THEIR COMPUTER ISN'T WORKING — WHAT DO I DO?

- 1.
- 2.
- 3.
- 4.
- 5.

I WANT STUDENTS TO BE ABLE TO FIX COMMON PROBLEMS THEMSELVES

- 1.
- 2.
- 3.
- 4.

HOW DO I SEE WHAT MY CLASS IS WORKING ON?

- 1.
- 2.
- 3.

A STUDENT FORGOT THEIR PASSWORD

Contact the system administrator (Mohsen). Account passwords are managed by the administrator — there's no self-service password reset for students at the moment.

SECTION 08

Tips

Small things that make the system work better for you

SECTION 08

Tips

Use a mouse

The lab map and some interfaces are easier to use with a pointer than on a touch screen. Works best on a computer.

KB articles save time

If you find yourself explaining the same fix repeatedly, write it up as an article. Next time, send students the link.

Tickets are the record

When you resolve a ticket, add a note about what the problem was and how you fixed it. Helps if the issue comes up again.

Map updates live

A device going offline shows up on the map before a student reports it. Spot problems early.

Log in once per session

You stay logged in while the browser tab is open. If you close it and come back later, you'll need to log in again.

Getting Help

If something isn't working as expected, or you need an account created/reset, or you want to suggest a feature:

Mohsen Shubar — System Administrator

Email: mohsen.salman099@gmail.com

For urgent issues during class (e.g., the system is down and students need to log tickets), contact Mohsen directly.

Last updated September 2026. Loading system overhaul — all pages now show smooth skeleton loading states instead of blank screens. Service worker enabled for faster repeat visits. Deploy transitions recover automatically if a student has an old cached version.
