Classroom accounts

Sign in with the account your instructor made. Instructor is L3.

Sign in with the account your instructor made. Instructor is L3.

How accounts are created

There is no shared class password and no built-in roster. Every account is made deliberately:

1. An instructor uses **Instructor signup** on the sign-in page and enters the **signup code** you give them. That creates their class and their own L3 account. Without the code, signup is refused.
2. The instructor opens **Class & students** and adds each student: full name, username, and a starting password.
3. Students sign in with that username and password. They can be removed, and their password can be reset, from the same page.

A class only ever sees its own students, tickets, portals and Lab map, so several instructors can run classes in the same deployment without touching each other's work.

Role	Level	Can do
Technician (student)	L1	Work the queue: claim, set priority, comment, escalate, resolve. Use the Lab map and Portals
Instructor	L3	Everything a student can, plus add and remove students, create tickets, generate a workload, and review resolved tickets

Creating tickets is instructor-only, so a student account has no **New ticket** button.

Username

Username are `firstname.lastname`, lower case, dots for spaces — `sara.ebrahim`, `ali.hashem`. The app normalises whatever you type, so `Sara Ebrahim` becomes `sara.ebrahim`. The current list for a class is always on the **Team** page; that page is the roster, not this document.

The default local account

A fresh local copy (`npm run seed`) contains exactly one account:

- Username `instructor` · password `ProCloud-G18` · class **CCST IT Support G18**

It has no students and no tickets until you add them. On a deployed copy, the `BOOTSTRAP_INSTRUCTORS` environment variable can create instructor accounts on first run so nobody is locked out (`08-configuration.md`).

Passwords

- Stored as a salted `scrypt` hash. Nobody, including the instructor, can read a student's password back.
- A forgotten password is **reset**, never recovered: **Class & students** → the student's row → **Reset password**.
- Do not write passwords on tickets.
