

Instructor class-day sheet

Instructor class-day sheet

One page for running CCST Ticketing in class. Live URL: <https://ccst.website>

Before students arrive

1. Open `/api/health` — need `"ok": true`, `blob0k`, `sessionSecret0k`, `classroomAiReady`.
2. Snapshot state: from the project folder run `npm run backup:azure`.
3. Hard-refresh the site once (Cmd/Ctrl+Shift+R) so everyone gets the current JS modules.

Sign in

Who	How
Default G18 instructor	Username <code>instructor</code> · password <code>ProCloud-G18</code> · class CCST IT Support G18
Other instructors	Instructor signup on the login page + the signup code from Azure App Setting <code>INSTRUCTOR_SIGNUP_CODE</code> (do not put that code in student handouts)
Students	Accounts you add under Class & students — no shared class password

Other instructor accounts may already exist on the live site (`mohsenshubar`, `mohsen.salman`, `mohsen.shubar`, `hasan.abbas`, etc.). Use the one for your class.

Class flow

1. **Class & students** → add each student (full name, username, password).
2. Set **Class SLA** if you want different response/resolve times.
3. Optional: class announcement note (shows on every student's pages).
4. **Generate a workload** — choose issue mix → **Generate**. Or create tickets by hand (**Ticket queue** → **New ticket**).
5. Students: **Ticket queue** → **Assigned to me** → set priority → **Lab map / Portals** → document → escalate or resolve.
6. You: **Live class board** for who is stuck; review resolved tickets; **Export CSV** / KPI PDF for marks.

During class

- **Reset to design** on the Lab map (instructor only) restores cabling/config; faults for still-open lab tickets stay so work remains solvable.
- **Remove all tickets** empties the class queue and undoes planted faults — confirm before you click.
- Marks anytime: **Class & students** → **Export CSV**.

After class

1. Export CSV / KPI PDFs if you need marks offline.
2. Optional another `npm run backup:azure`.
3. Leave student passwords as-is, or reset individuals from the roster.

If something looks wrong

Symptom	Check
Orange “nothing is being saved” banner	Storage fell back to memory — Azure blob settings
Login rejected for <code>instructor</code>	Password should be <code>ProCloud-G18</code> (reset if someone changed it)
Blank / old UI	Hard-refresh; confirm page loads <code>/js/app.js?v=64</code> as a module
Instructor signup closed	<code>INSTRUCTOR_SIGNUP_CODE</code> missing on App Service
Students from another class appear	Each class only sees its own roster — you are on the wrong instructor account
